

Regional Career Pathways Directors (4 total) with one serving in each of regions listed below:

Wisconsin Indianhead Region (which include some CESA 11, 12 districts):

This rural region will bring the challenges of a large geographic area. With representation from two major manufacturers in the region there is so much that can be brought to scale in this part of the state. Not to mention the great relationship that Wisconsin Indianhead Technical College has with the local CESAs. There is a convergence of the right people at the right time to make this career pathways work come to life.

Madison Region (which include some CESA 2, 5 districts):

This region contains our second largest school district, Madison Metropolitan School District. Their experience in unveiling personalized pathways will provide learning opportunities statewide. Districts in this region have a history of strong career pathways partnerships with business and higher education.

Milwaukee Region (which include some CESA 1 districts):

This region contains our largest school district, Milwaukee Public Schools (MPS). With other stakeholders in the Milwaukee area, resources abound to offer immense opportunity. Additionally, New Berlin is highly engaged in this project and has done some great work with pathways. Although they are not within the boundaries of MATC, they are near the border and work closely with UW Milwaukee. This border blending will help to inform and assist other multiple border relationships in Wisconsin.

Moraine Park Region (which include some CESA 6 districts):

This region is a part of CESA 6, who is a leader in the state regarding regional pathways work, so this will be an opportunity to bring their expertise to this project. The President of Apache Stainless Equipment, located in Beaver Dam, is highly engaged with this project and is leading the CEO champions work.
